U.S. EPA Structure Questions

Building/Structure Information

- 1. Identify the current owner(s) and/or residents of the structure. If possible, please provide any documentation, such as homesite leases, grazing permits, or probate documents.
- 2. To the best extent possible please identify:
 - a. When the structure was built, and the dates of any major changes to the structure.
 - b. Who built the structure.
 - c. The type of structure built (Hogan, Log Home, Cinder Block, storage shed, etc.).
 - d. The source of the materials used to build the structure and foundation and any additions or revisions to the structure, including whether any of the materials came from any mine or mill sites. If known, please provide the name and location of any such mine or mill sites.
 - e. Whether any fill was used in the homesite yard, and if so, whether any of the fill materials came from any mine or mill sites. If known, please provide the name and location of any such mine or mill sites, and the locations of the fill on your homesite.
 - f. The type of materials used (e.g., waste rock, tailings, etc.) and any other physical or chemical characteristics of these materials you can recall.
 - g. Any other information about the building of the structure that you think would be useful to EPA's efforts to identify and locate the source of the contaminated materials used in the structure or in the yard.

Mine Information

- 3. Please Identify whether you or anyone in your family, or any current or former occupant of the structure, worked at any of the uranium mines or mills. If so, please provide the following information:
 - a. Which family member(s) worked at the mine and the type of job(s) held.
 - b. The name and location of the mine(s) or mill(s).
 - c. The approximate length of time and years when the family member(s) worked at the mine.
 - d. Whether the mine or mill operators encouraged individuals to use the mine waste materials for construction or other purposes.
 - f. Any other information you think would be useful to EPA's efforts to identify and locate the source of the contaminated materials used in the structure or in the yard.
